DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-4 in the reply filed on 5-11-07 is acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Kosuzu et al. (7,141,187).

Kosuzu et al. teaches in column 25, line 30 to column 26, line 35, that the anode comprises a silicon-based material fine powder, an electrically conductive auxiliary and a binder where the binder can be polyvinyl alcohol and that the desired density of the anode material is controlled to fall between 0.9-2.5 g/cm³ or more preferably 1.0-1.8 g/cm². Kosuzu et al. teaches in columns 43-44, Example 7, that the anode comprises a silicon based fine powder of Si-Sn-Cu alloy fine powder having an average particle size of 0.28 μ m, natural graphite powder, acetylene black powder, carboxymethyl cellulose and polyvinyl alcohol was made into a paste and applied to a

copper foil having a thickness of 15 um. The anode was shown having 1000 mAh/g per a unit weight of the electrode material layer.
